Molecular and Cellular Biology
Strasbourg, France

Position for a bioinformatician in Cancer Research

A position is open in the Gronemeyer laboratory at IGBMC for a bioinformatician to study the epigenomics of breast cancer and reference cancer models. The successful candidate will be involved in the analysis and integration of genome-wide biological data, develop bioinformatics tools and establish data analysis pipelines for High-Throughput Sequencing data (ChIP Seq & RNA Seq). The project will be done in collaboration with a major genome center in the world.

Candidates must be highly motivated to work on biological questions and flexible to interact with the various members of the laboratory. They should have a degree in computational biology, bioinformatics, statistics or equivalent level of knowledge. Candidates must be comfortable working in UNIX/Linux environments and possess excellent programming skills (R, perl, python, etc). Experience in cloud computing would be considered an advantage. Operating language in the Institute is English. Applications including a cover letter, curriculum vitae and the names of two referees should be sent to: **Dr. Irene Yujnovsky** at **ireneyuj@igbmc.fr**

Information about the institute and the laboratory can be found at:
